

Time Travelers

FTC 13808

Learning from the past,
Living in the present,
Creating the future.

The *FIRST* Robotics program teaches Gracious Professionalism, which is a way of doing things that encourages high-quality work, emphasizes the value of others, and respects individuals and the community. Our students develop and work in an environment within their team, and with other teams, that mimic a professional work environment and business.

Our team not only is responsible for building and programming a robot, they are responsible for marketing our team, fundraising, developing an engineering notebook, public speaking, and more. We truly believe this program prepares kids for any career. These are our future engineers, scientists, entrepreneurs, artists, and thinkers.

Working together as a robotics team, we seek to develop our skills and expand our knowledge of scientific, technical, engineering, and mathematics disciplines, all while promoting Christian principle. With persistence, passion, unity, and creativity, we become successful.
